CYO TEST AND TRACE POLICY

CYO has developed the following policy to ensure the health and well-being of all the CYO community:

Parents/guardians are responsible to monitor the health of their child, including a temperature check and general observation for symptoms prior to arriving at the field of play. All CYO staff, coaches, volunteers, officials and attendees will complete a screening questionnaire prior to each event. This form is posted on our website.

In the event a player develops symptoms or tests positive for COVID-19 within 48 hours following participation in a game, practice, or other CYO team activity, the parent/guardian MUST report this positive result to the coach. The coach will inform the Parish Athletic Representative, who will advise the CYO office.

The following will then be notified of the positive case:

The pastor of both parishes of the teams that played;

The parish representative and the coach of the opposing team;

The parents/guardians of all players on BOTH teams;

The game officials;

The principal of each school that the participating children attend.

The COVID positive player, and all close contacts on the team, who are students of a Diocesan Catholic Academy, will need to follow all protocols and procedures of the Office of the Superintendent-Catholic School Support Services, and cannot return to play until cleared of any quarantine that is imposed.

If the COVID positive player, or any close contacts on the team, are students of a NYCDOE School or a Private or other school, they will need to follow any additional protocols and procedures, over and above those required by the Office of the Superintendent-Catholic School Support Services, that may be required by their school, and cannot return to play until cleared of any quarantine that is imposed.

In the event a staff member, coach, official or attendee develops symptoms or tests positive for COVID-19, we will follow the same protocols as described above.
